DEQ: Permit application fees required for Virginia Water Protection permits – while detailed in 9VAC25-20 – are conveyed to the applicant by the applicable DEQ office (http://www.deq.virginia.gov/Locations.aspx). Complete the Permit Application Fee Form and submit it per the instructions to the address listed on the form. Instructions for submitting any other fees will be provided to the applicant by DEQ staff.

WIB 936

- VMRC: An application fee of \$300 may be required for projects impacting tidal wetlands, beaches and/or dunes when VMRC acts as the LWB. VMRC will notify the applicant in writing if the fee is required. Permit fees involving subaqueous lands are \$25.00 for projects costing \$10,000 or less and \$100 for projects costing more than \$10,000. Royalties may also be required for some projects. The proper permit fee and any required royalty is paid at the time of permit issuance by VMRC. VMRC staff will send the permittee a letter notifying him/her of the proper permit fees and submittal requirements.
- LWB: Permit fees vary by locality. Contact the LWB for your project area or their website for fee information and submittal requirements. Contact information for LWBs may be found at http://ccrm.vims.edu/permits_web/guidance/local_wetlands_boards.html.

FOR AGENCY USE ONLY
Notes:
JPA # 25-1652

APPLICANTS Part 1 – General Information

PLEASE PRINT OR TYPE ALL ANSWERS: If a question does not apply to your project, please print N/A (not applicable) in the space provided. If additional space is needed, attach 8-1/2 x 11 inch sheets of paper.

 NOTE: REQUIRED FOR ALL PROJECTS

PRIVACY ACT STATEMENT: The Department of the Army permit program is authorized by Section 10 of the Rivers and Harbors Act of 1899, Section 404 of the Clean Water Act, and Section 103 of the Marine Protection Research and Sanctuaries Act of 1972. These laws require that individuals obtain permits that authorize structures and work in or affecting navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters prior to undertaking the activity. Information provided in the Joint Permit Application will be used in the permit review process and is a matter of public record once the application is filed. Disclosure of the requested information is voluntary, but it may not be possible to evaluate the permit application or to issue a permit if the information requested is not provided.

CERTIFICATION: I am hereby applying for all permits typically issued by the DEQ, VMRC, USACE, and/or Local Wetlands Boards for the activities I have described herein. I agree to allow the duly authorized representatives of any regulatory or advisory agency to enter upon the premises of the project site at reasonable times to inspect and photograph site conditions, both in reviewing a proposal to issue a permit and after permit issuance to determine compliance with the permit.

In addition, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Part 3 – Appendices (continued)

Appendix B: Projects for Shoreline Stabilization in tidal wetlands, tidal waters and dunes/beaches including riprap revetments and associated backfill, marsh toe stabilization, bulkheads and associated backfill, breakwaters, beach nourishment, groins, jetties, and living shoreline projects. Answer all questions that apply. Please provide any reports provided from the Shoreline Erosion Advisory Service or VIMS.

NOTE: It is the policy of the Commonwealth that living shorelines are the preferred alternative for stabilizing tidal shorelines (Va. Code § 28.2-104.1). Information on non-structural, vegetative alternatives (i.e., Living Shoreline) for shoreline stabilization is available at http://ccrm.vims.edu/coastal_zone/living_shorelines/index.html.

1. Describe each revetment, bulkhead, marsh toe, breakwater, groin, jetty, other structure, or living shoreline project separately in the space below. Include the overall length in linear feet, the amount of impacts in acres, and volume of associated backfill below mean high water and/or ordinary high water in cubic yards, as applicable:

220 L.F. of rock sill, filter cloth 30' oyster shell bag groin 200 c.vds of sand nourishment Spartina patens & alternaflora planted 18" o.c.

Received by VMRC July 23, 2025 / Ira

2.	What is the maximum encroach	Chann	elward of mean high water? 40 feet. nelward of mean low water? 30 feet. nelward of the back edge of the dune or beach? Na feet.
3.	Please calculate the square foota • Vegetated wetlands	-	
			square feet
	 Non-vegetated wetlands 		square feet
	 Subaqueous bottom 		square feet
	 Dune and/or beach 	NA	square feet
	serviceable, existing structure?		No. head be no further than two (2) feet channelward of the existing
	If no, please provide an explanat	tion for the p	purpose and need for the additional encroachment.
Apı	plication Revised: October 2019		17

Part 3 – Appendices (continued)

5.	Describe the type of construction and all materials to be used, including so applicable (e.g., vinyl sheet-pile bulkhead, timber stringers and butt piles, I source; broken concrete core material with Class II quarry stone armor ove NOTE: Drawings must include construction details, including dimensimaterials, including fittings if used.	00% sand backfill from upland filter cloth).
	Quarry stone, filter fabric	
6.	If using stone, broken concrete, etc. for your structure(s), what is the average Core (inner layer) material 6-16" pounds per stone Class size Armor (outer layer) material 150-500 pounds per stone Class size	Core
7.	For beach nourishment, including that associated with breakwaters, groins following:	or other structures, provide the
	Volume of material	ean low water f mean high water
	Area to be covered square feet channelward o square feet landward of me cubic yards channelward of cubic yards landward of me cubic yards landward	an low water f mean high water
	 Source of material, composition (e.g. 90% sand, 10% clay): 90 % sand Method of transportation and placement: Truck, heavy equipment	
	 Describe any proposed vegetative stabilization measures to be used, incompacing, monitoring, etc. Additional guidance is available at http://www.vims.edu/about/search/index.php?q=planting+guidelines: 	uding planting schedule,
	Spartina patens and alternaflora 18" o.c.
